01 What is this app?

A complete billing & accounting app built for small and medium shops and businesses. No computer or extra hardware needed — just your Android

phone.

Everything from making a bill to the balance sheet happens inside the same app. All data is stored on the phone itself, so billing never stops even without internet. Internet is only needed if you want to take a backup.

15 business types	80+ screens & features	20+ reports	0 monthly server cost
-----------------------------	----------------------------------	-----------------------	---------------------------------

02 Who can use it?

Pick a business type the first time the app opens — the app then shows only the screens that business needs. The rest stay hidden, and it can be changed later.

General store	Textile shop	Mobile shop	Electrical & plumbing	Automobile	
Grocery	Medical store	Restaurant	Rental	Medical lab	Gym
Coaching centre	Service centre	Bulk SMS	Personal use		

The highlighted ones have their own dedicated module — details in section 04.

03 Main features

These are grouped the same way the app's own dashboard groups them.

SALES Sales	PURCHASE Purchase
------------------------------	------------------------------------

Fast billing by scanning a barcode or picking an item.

- New bill & quick bill
- Quotation, estimate
- Order, delivery note
- Sales return
- Bill history & correction

The full cycle of buying stock from a supplier.

- Purchase entry
- Purchase order (LPO)
- Purchase quotation comparison
- Material receipt (GRN)
- Purchase return

ACCOUNTS

Accounts

Full double-entry accounting, like Tally.

- Cash book, journal, contra
- Receipt & payment
- Outstanding (receivable/payable)
- Bank reconciliation
- Cheque register, fixed assets
- Cost centre, recurring journal

REPORTS

Reports

Every report can be downloaded as PDF / Excel.

- Balance sheet, profit & loss
- Trial balance, day book, ledger
- Cash flow statement
- Sales, profit, item-wise sales
- Stock, item movement, expiry
- GST / VAT reports

MASTERS

Master data

Add once, use everywhere.

- Customers, suppliers, customer type
- Items, categories, bundles
- Import from Excel
- Users & permissions
- Backup & restore

DAILY USE

Everyday tools

Small helpers needed every day at the shop.

- Calculator (with labels)
- Diary & sticky note
- Poster maker
- Price search
- Bulk SMS & templates

04 Modules for specialised businesses

Beyond a regular shop, a few business types get a complete system of their own inside the app.

Medical lab	Test master, patient records, lab bill, result entry, A4 result print, balance receipt.
Gym	Member registration, photo, plan, installment fees, fee-due report, batch timing.
Coaching centre	Course, class, subject, teachers, students, fees, attendance, enquiries and follow-up.
Service centre	Job card, model/vehicle master, assigning to staff, priority, status tracking, pending jobs.
Rental	Rent-out bill, return, rental-period alerts, item-wise report.
Production	Recipe/procedure, raw-material usage, production cost, unit-cost calculation.
Bulk SMS	Contact groups, message templates, send in bulk, delivery report.

05 Online ordering & the customer app

Alongside the shop owner's app there is a dedicated ordering system for customers — just your own server, no extra monthly cost.

CATALOG

Online catalog

The shop owner picks which items to show online, optionally with a special offer price and a shop banner image, and uploads it.

ORDER

Customer ordering

Customers browse the catalog and place an order through the customer app (or a web page opened by scanning a QR code) — with location, a note, and a photo attachment. Past orders can be reordered from Order History.

LIVE

Live notifications

The shop owner is notified the moment a new order comes in, and the customer is notified the moment its status changes (accepted/ready/delivered) — both inside the app.

CHAT

Chat

Shop owner and customer can message each other directly about an order — on both sides, right inside the app, with its own notification.

DISCOVER

Nearby shops & referral

Customers can browse nearby shops by category. Shop owners get a referral link to invite other shop owners.

NO APP

Install-free option

For customers who don't want to install an Android app, and for iPhone users — the same ordering flow is also available as a web page (PWA) opened straight in the browser.

06 Other features worth mentioning

TAX

GST & VAT

Full Indian GST — CGST/SGST, inter-state IGST, composition scheme, cess, HSN, bill numbers per financial year. Also Saudi ZATCA and UAE VAT formats for the Gulf.

PRINT

Printing

Print directly on a Bluetooth thermal printer (58mm / 80mm), or A4 on a WiFi printer. PDFs come out in the same width chosen in Settings.

SHARE

WhatsApp share

Send the bill as a PDF straight to the customer's WhatsApp number. Add a UPI QR code to the bill so the customer can scan and pay.

BACKUP

Backup & sync

Back up to the phone, push to a server. Merge data when two phones are used for the same shop. One-tap repair if duplicates show up.

INPUT

Fast entry

Barcode scanning, reading a list with the camera (OCR), voice typing (including Malayalam), and handwriting — all supported.

CALCULATOR

Billing calculator

For quickly adding up during a rush. Every total can carry a label, be saved under a customer, and turned into a real bill later. Full-screen view to show the customer.

USERS

Multiple users

STOCK

Stock control

Separate logins for staff. Control who can do what — e.g. can create a bill but can't delete one.

Batch number and expiry date, two units (box/piece), low-stock alerts, stock as of any given day.

07 How to run a demo

A sequence for showing the app to a shop owner in 10–15 minutes. Following this order gets them to their first bill on their own.

01 Pick the business type

The app asks for the shop's type when it first opens. Pick their business.

SAY

From now on you'll only see the screens your shop needs — the rest won't get in your way.

02 Add the shop's details

Settings → shop name, address, phone, GST number, logo. This appears on every bill.

03 Add a few items

Items → add 2–3 items. If they have an Excel file, show it importing in one go.

SAY

If your old list is in Excel we can load it all at once — no need to type each one.

04 Add a customer

Customers → name and phone number. A phone number is needed to send bills over WhatsApp.

05 **Make the first bill**

New Bill → pick the customer → add items (scan a barcode if there is one) → payment method → Save.

NOTE

If saved as credit, show that the amount now appears as receivable in the customer's account.

06 **Print / share the bill**

From the same screen: PDF, WhatsApp, print (Bluetooth or WiFi). If there's a thermal printer, print it to show.

07 **Show the calculator**

Dashboard → Calculator. Add up amounts, put a label, save under a customer's name. The full-screen view can be shown to the customer.

SAY

If there's no time for a full bill during a rush, this is enough — turn it into a bill later.

08 **Show the reports**

Sales Report, Outstanding (who owes money), Stock, profit & loss. Download any one as PDF to show.

09 **Show backup and finish**

Backup → show taking a backup to the phone.

SAY

Even if the phone is lost, the accounts aren't — the backup file restores everything exactly on a new phone.

08 Frequently asked questions

- + **Is internet needed?**
- + **Does online ordering need its own server?**
- + **Can old accounts be brought in?**
- + **Can it be used on two phones at once?**
- + **Can a shop without GST use it?**
- + **Is a printer required?**
- + **Can a wrong bill be corrected?**

After the demo

Once the app is installed with the shop's details and a few items added, they can start billing that same day. It helps to call once in the first week as a reminder to take a backup.
